

## Electronic Purification System (IonCleanse®)

Cancer, candida, yeast, mold, fungus, viruses, bacteria and parasites cannot survive in a ph of 7.0 or above.

Low PH Balance leads to acidosis

7.0 - 7.4 ph = optimum health and energy

6.8 ph = beginning of metabolic acidosis

6.4 ph = impaired digestion, hard to lose weight

6.0 ph = 10 times less oxygen to the cells

5.5 ph = extreme acidosis, cancer and degenerative disease

5.0 ph = 100 times less oxygen to the cells and life threatening

(You can test and monitor your ph balance with litmus paper)

The following describes the five pre-set options and recommended use:

1. All Positive – Clinicians only. (Which produces a predominance of negative ions in the water) **Negative ions produce an increase in PH.**

2. All Negative – Clinicians only. (Which produces a predominance of positive ions in the water)

3. 70+ (positive) / 30– (negative).

This is the generic setting that should be used by non-clinicians and those who do not muscle test for one polarity or another.

4. 15+ (positive) / 10– (negative) / 5+ (positive)

5. 10– (negative) / 15+ (positive) / 5– (negative)

Note: Options 4 and 5 were developed over thousands of sessions. We have found that people who test for positive polarity first generally require option 4; those who test for negative polarity first generally require option 5.

Therefore, in most cases where patients test for positive, use option 4 for those who test strong in negative, use the option 5.
